

REVENUE OF \$18,000,000.—TREASURY STATEMENT.

LETTER

FROM THE

SECRETARY OF THE TREASURY,

SUBMITTING TO THE HOUSE

An explanation in relation to the estimated Revenue of \$18,000,000; also, a statement exhibiting a comparison between the duties payable under different rates.

FEBRUARY 9, 1833.

Read, and laid upon the table.

TREASURY DEPARTMENT,

February 8, 1833.

SIR: In compliance with so much of a resolution of the House of Representatives of the 5th instant, as directs the Secretary of the Treasury "to communicate to the House the data by which, taking an average of the importations for the last six years as a probable criterion of the ordinary importations for some years to come, the revenue from the customs, at the rates of duty payable after the 3d of March next, may be estimated at \$18,000,000 annually," I have the honor to submit the following explanation of the manner in which that result has been obtained.

It is shown by the commercial statements which have been annually reported to Congress since the year 1820, that there is a gradual increase in the value of the imports into the United States, which, though sometimes fluctuating in different years, is still found to be a positive and certain increase, when a comparison is made between different terms of years. From 1821 to 1832, inclusive, is 12 years. By dividing this series into two periods of six years each, it was seen that the average annual value of the imports of the first period, ending with the 30th of September, 1826, is \$80,878,349, and for the second period, ending on the 30th of September, 1832, \$86,263,955. It was, therefore, supposed that, as the average of the

first period, compared with the average of the second period, had furnished a criterion by which the ratio of increase within the second period, resulting as well from the increase in population as from all other circumstances affecting the subject, was ascertained, so the average of the second period might, on the same ratio, furnish a probable criterion for the average of a third period. Thus, as the average of \$80,878,349 had been followed by that of \$86,263,955, it was estimated that the latter might probably be followed by an average of \$92,000,508: the increase in each term being at the average ratio of nearly $6\frac{2}{3}$ per cent. The probability of this estimate was corroborated by an examination of the imports of the last three years, in the second period, viz. 1830, '1, and '2, which are found to present an annual average of \$91,699,100, being nearly the same as the estimated annual average of the ensuing six years.

For convenience of reference, the imports of the series embraced in this calculation, are exhibited in the annexed statement marked A. Having thus explained in what manner the average importations of the last six years have been taken as a probable criterion for, or means by which to judge of, or estimate, the probable importations for some years to come, it remains to show on what data the revenue from customs, at the rates payable after the 3d of March next, may be estimated at \$18,000,000.

It will be seen by the statement marked C, which is herewith communicated under the second part of the resolution of the House, that the gross amount of the duties on imports, at the rates payable after the 3d of March next, averages 23 and 2-3 per cent.; and this rate upon the estimated average imports of \$92,000,000, would be \$21,773,450

It will be seen by statement B, compiled from the documents which annually accompany the Treasury report, that, for the six years ending with 1831, the actual difference between the gross amount of revenue and the nett amount of revenue, including drawbacks, expenses of collection, and all other deductions, was $18\frac{95}{100}$ per cent., which, on the above estimated gross revenue, would be - - 4,126,069

Leaving for the nett revenue to be received into the Treasury \$17,647,381

In the year 1831, which is the last year of which the revenue accounts have been completely settled at the Treasury, these deductions amounted only to $16\frac{1}{2}$ per cent., which would leave for the nett revenue, \$18,126,397.

It was not thought necessary to make any deduction on account of the gradual reduction of the duties on wines after 1833. Nor, on the other hand, was it thought necessary to make any addition on account of the increased consumption of imports in consequence of the reduction of duties generally. There are, perhaps, other matters bearing on the subject, which, if perfect accuracy were attainable, it might be proper to bring into view. But it was deemed sufficient for all the purposes of the report, to present merely a general estimate, not pretending to perfect accuracy; and, it is believed, that sufficient data have been shown for stating the revenue from customs in round numbers at \$18,000,000.

In compliance with a second part of the resolution, directing the Secretary of the Treasury to communicate to the House "how far the duties, payable after the 3d of March next, fall short of, or exceed, the amount which would have been payable, had the bill, transmitted to the House by the Secretary

of the Treasury on the 27th of April last, become a law," I have the honor to transmit a statement, marked C, exhibiting a comparison between the duties payable under the two rates, as well in regard to each article as in the aggregate.

To account for any apparent discrepancy between the amount of the gross duties as shown by this statement, and that which accompanied the bill referred to, it is proper to observe, that the present statement is calculated upon the importations of 1831, and the former upon those of 1830. As the estimated gross duties under the act of last session appears, from this statement, to be less by \$161,448, than that under the bill from this Department, it is to be remarked that this difference affords no criterion for judging of the effects of the two plans upon the important interests affected by them, but results from a greater reduction of duty on the unprotected, and a less reduction on the protected, articles by the act, than was proposed by the bill.

Thus, the duties payable on wool, woollens, cotton goods, stuff goods, ready made clothing, salt, and indigo, which constitute the principal protected articles, under the act, are estimated at	-	-	\$11,265,635
and, under the bill, at	-	-	9,604,873

Showing an excess of duties under the act, over those proposed in the bill, on these protected articles, of	-	-	\$1,660,762
---	---	---	-------------

So, on the other hand, upon tea, coffee, and silks, which are among the principal unprotected articles, the duties payable under the bill, are estimated at	-	-	\$2,734,544
and under the act, at	-	-	881,040

Showing a reduction of duties under the act, below those proposed in the bill, on those unprotected articles, of	-	-	\$1,853,504
--	---	---	-------------

It may be proper further to remark, that the bill submitted by this Department at the last session, was designed, in the first instance, to raise an amount of revenue sufficient for the public service until the end of the present year; and that the reduction of \$6,000,000, either by a diminution of the duties on imports, or partly by a relinquishment of the proceeds of the public lands, was recommended in the annual report of December last, upon an excess, which it is estimated will exist after the present year.

I have the honor to be,

With great respect,

Your obedient servant,

LOUIS M'LANE,

Secretary of the Treasury.

The Hon. the SPEAKER
of the House of Representatives.

(A.)

STATEMENT of the annual value of Imports, from the year 1821 to 1832, inclusive.

The value of the imports of 1821 was	-	-	-	\$62,585,724
Do do 1822 "	-	-	-	83,241,541
Do do 1823 "	-	-	-	77,579,267
